

UNCLE HARRY'S

Natural Products

FAMILY-RUN SINCE 1991

Uncle Harry's has been dedicated to making earth-friendly products at people-friendly prices since 1991. Our mission is to respect the Earth and all of its inhabitants by offering the cleanest and most affordable body care products available while striving for zero waste in all facets of our business.

Harry's homemade product labels and hand-cut cardboard displays

Tooth Powder, our very first product, had labels cut and glued by hand. We're a true family-run business, and our DIY spirit is still a big part of every thing we do!

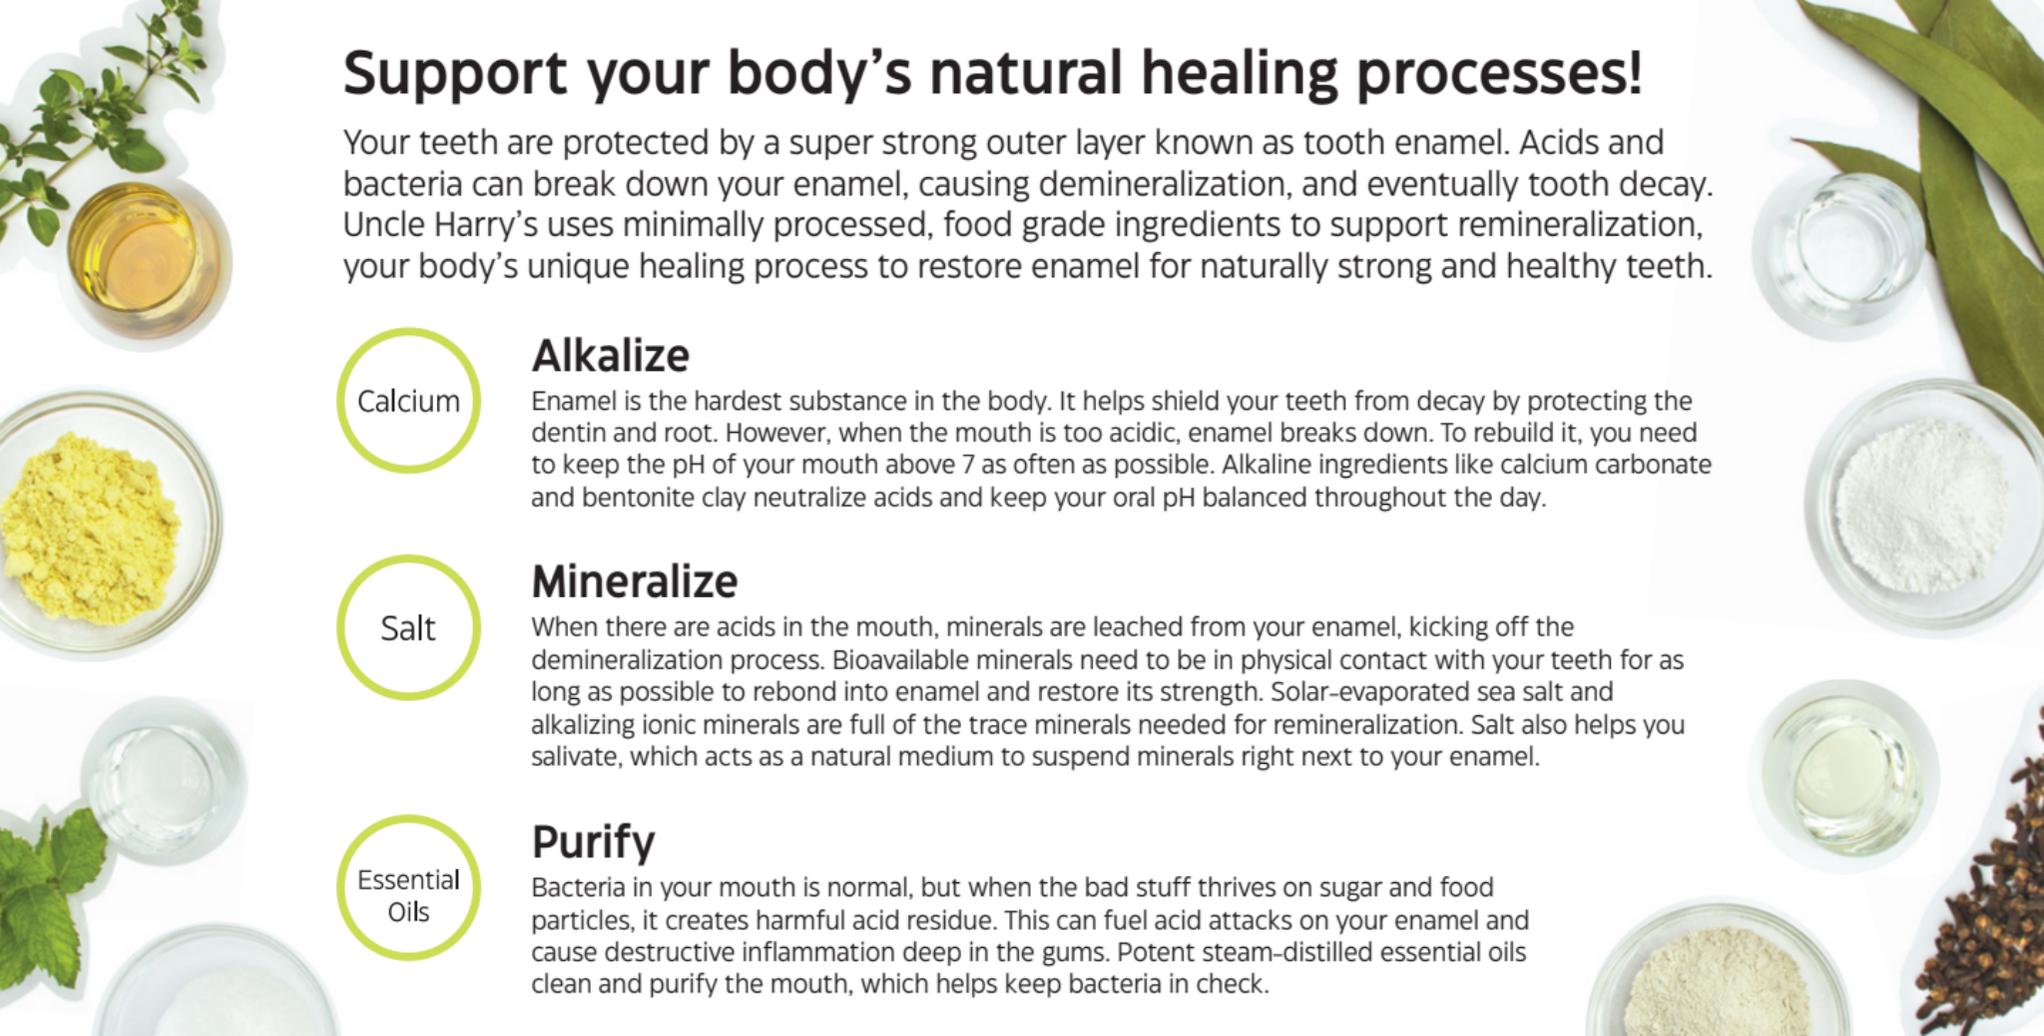

Photo taken in our back yard, circa '93, on an upside down flower pot.

SAVE YOUR TEETH & GUMS

Support your body's natural healing processes!

Your teeth are protected by a super strong outer layer known as tooth enamel. Acids and bacteria can break down your enamel, causing demineralization, and eventually tooth decay. Uncle Harry's uses minimally processed, food grade ingredients to support remineralization, your body's unique healing process to restore enamel for naturally strong and healthy teeth.

Calcium

Alkalize

Enamel is the hardest substance in the body. It helps shield your teeth from decay by protecting the dentin and root. However, when the mouth is too acidic, enamel breaks down. To rebuild it, you need to keep the pH of your mouth above 7 as often as possible. Alkaline ingredients like calcium carbonate and bentonite clay neutralize acids and keep your oral pH balanced throughout the day.

Salt

Mineralize

When there are acids in the mouth, minerals are leached from your enamel, kicking off the demineralization process. Bioavailable minerals need to be in physical contact with your teeth for as long as possible to rebond into enamel and restore its strength. Solar-evaporated sea salt and alkalizing ionic minerals are full of the trace minerals needed for remineralization. Salt also helps you salivate, which acts as a natural medium to suspend minerals right next to your enamel.

Essential Oils

Purify

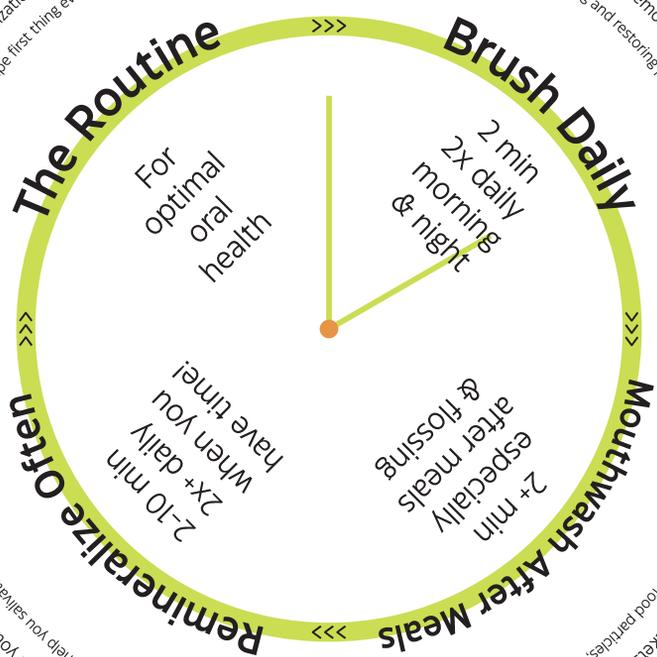

Bacteria in your mouth is normal, but when the bad stuff thrives on sugar and food particles, it creates harmful acid residue. This can fuel acid attacks on your enamel and cause destructive inflammation deep in the gums. Potent steam-distilled essential oils clean and purify the mouth, which helps keep bacteria in check.

UNCLE HARRY'S REMINERALIZATION SYSTEM

Alkalinize · Mineralize · Purify

Enamel breaks down when your mouth is acidic, causing tooth decay. Keep your mouth clean, alkaline, and ready to mineralize throughout the day. Follow our routine to fight demineralization and support strong teeth & gums. For best results, tongue scrape first thing every morning, and floss daily!

Give your teeth the concentrated, bioavailable trace mineral slats they need to naturally rebuild strong enamel. Neutralize acid attacks and mineralize your mouth at home, work, or on the go. Liquid and powder form, both products help you salivate and are full of minerals for re-absorption.

Clean your teeth everyday with pH-balancing Tooth Powder, Toothpaste, or Tooth Suds. These alkaline daily brushing products remove buildup while gently whitening teeth. All three are effective for stabilizing and restoring problem-prone areas in the mouth.

Shower your teeth with ultra fresh Miracle Mouthwash to neutralize harmful acids and bacteria. Swishing penetrates deep into the pockets of the mouth to detoxify and soothe. Miracle Mouthwash helps dissolve food particles, and greatly promotes gum health.
